

DISCOVERY

BERMUDAGRASS™

LESS MOWING

- ✦ **Reduced Mowing up to 75%!**
- ✦ **Significantly Reduced Seed Heads**
- ✦ **Good Cold Tolerance**
- ✦ **Dense Sod With Minimal Thatch**

Discovery is a new variety of Bermudagrass developed in Europe and selected in the United States. Discovery can be used in any landscape application that would benefit from the natural drought tolerance of a Bermudagrass but with the added benefits of 75% less mowing, little to no unsightly seed heads, and rapid lateral growth.

Discovery is a bermudagrass homeowners will mow 75% less!

Discovery after 77 days with no mowing. Contrast mowed area in front to unmowed area in back.

Discovery exhibits rapid lateral growth to recover from damage

From Top to Bottom: Patriot, Discovery, Celebration, and TifWay 419. Discovery exhibits equal lateral spread to Patriot and TifWay 419, but less lateral spread than Celebration.

Discovery (right) compared to Patriot™ (left) mowed and unmowed. Discovery displays virtually no seedheads

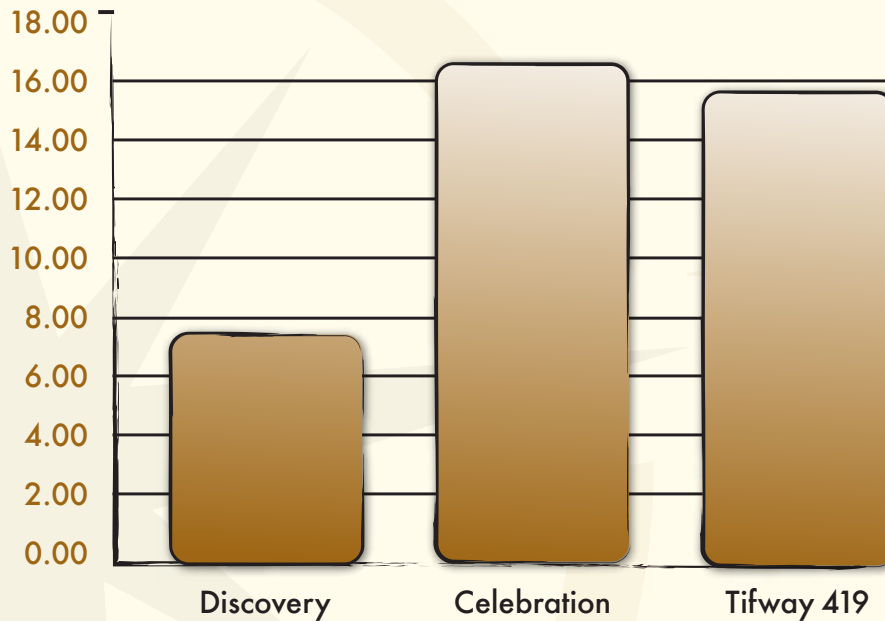

DISCOVERY

BERMUDAGRASS™

LESS MOWING

Discovery can be mowed **once a month without scalping** and produce **50% less clippings** than Tifway 419 or Celebration®

Total Clippings (lbs.) after 28 days without mowing

Visual Appearance after being mowed once after 28 days
